# The Spectral Theorem

**proof of the spectral theorem - mit mathematics** - proof of spectral theorem. recall that we are proving only that a self-adjoint operator has the orthogonal eigenspace decomposition described. we proceed by induction on  $\dim V$ . if  $\dim V = 0$ , then  $S = 0$  and there are no eigenvalues; the theorem says that the zero vector space is an empty direct sum, which is true by definition. 2 **the spectral theorem - u-m isa mathematics** - the fundamental theorem of algebra promises us that such a factorization is possible if we use complex numbers. however, it turns out in our case that life is much better than this: lucky fact 1: all the roots of  $f$  are real. step 2 for each eigenvalue  $\lambda$ , compute an orthonormal basis for  $\ker(A - \lambda I)$ . **24. eigenvectors, spectral theorems - math user home pages** - 24. eigenvectors, spectral theorems 24.1 eigenvectors, eigenvalues 24.2 diagonalizability, semi-simplicity 24.3 commuting operators  $ST = TS$  24.4 inner product spaces 24.5 projections without coordinates 24.6 unitary operators 24.7 corollaries of the spectral theorem 24.8 spectral theorems 24.9 worked examples 1. eigenvectors, eigenvalues **spectral theorem - mathematics** - spectral theorem 3 thus, if  $i \neq j$ , then  $\langle v_i, v_j \rangle = 0$ . the situation is more complicated if there is repeated eigenvalues. for instance, one might worry the matrix is "defective," that is the sum of the geometric multi- **lecture 2: spectral theorems - drexel university** - lecture 2: spectral theorems this lecture introduces normal matrices. the spectral theorem will inform us that normal matrices are exactly the unitarily diagonalizable matrices. as a consequence, we will deduce the classical spectral theorem for hermitian matrices. the case of commuting families of matrices will also be studied. **spectral measures, the spectral theorem, and ergodic theory** - spectral measures, the spectral theorem, and ergodic theory sam ziegler the spectral theorem for unitary operators the presentation given here largely follows [4].  $k$  will refer to the unit circle throughout. recall that a measure preserving automorphism (m.p.a.)  $T$  on a borel probability space  $(X, \mathcal{B}, \mu)$  gives rise to a unitary map on  $L^2(X, \mu)$  via ... **the spectral theorem for normal linear maps** - the spectral theorem for complex inner product spaces shows that these are precisely the normal operators. theorem 5 (spectral theorem). let  $V$  be a finite-dimensional inner product space over  $\mathbb{C}$  and  $T \in \mathcal{L}(V)$  is normal if and only if there exists an orthonormal basis for  $V$  consisting of eigenvectors for  $T$ . proof. " $\Rightarrow$ " suppose that  $T$  ...
